EDUCATION

University of Waterloo

Sep 2022 – Apr 2027

Bachelor of Applied Sciences in Computer Engineering

- **Relevant courses:** Real-time OS, Databases, Computer Networks, Systems Programming and Concurrency

TECHNICAL SKILLS

Languages: Python, Ruby, C, C++, Go, Java, GraphQL, TypeScript, Verilog

Libraries & Frameworks: Ruby on Rails, React, PyTorch, OpenCV, pandas, Angular, Next.js, Vue.js

Tools & Databases: Buildkite, Artifactory, Docker, Sentry, Redis, MongoDB

EXPERIENCE

Software Engineer Intern (QE Infra) | *Go, Ruby on Rails, Buildkite*

Jan 2026 - Apr 2026

StackAdapt

Toronto, ON

- Predictive Test Selection

Software Engineer Intern | *React.js, TypeScript, Material UI*

Jan 2025 – Apr 2025

SuperWorld Inc.

Miami, FL

- Engineered a geolocation-based **virtual check-in** feature for SuperWorld Map using the Haversine formula algorithm, enabling users to authenticate location proximity within a 300m radius, thus enhancing user engagement through location verification
- Played a key role in developing our proprietary **conversational AI interface** powered by Meta LLaMA 3, enhancing user retention through personalized map interactions, persistent chat history, and intuitive mobile-first UX, thus growing active user-base by 36%
- Built a React + TypeScript dashboard with async parallel API calls for real-time KPI updates and interactive Recharts visualizations

Test Engineer Intern | *Azure DevOps, Perl, Postman*

Jan 2024 – Aug 2024

First National Financial LP

Toronto, ON

- Developed **Python** and **Perl** scripts to automate pooling target validation and improve testing processes, ensuring higher reliability and reducing manual efforts by **30%**
- Tested mortgage broker tools for BMO, TD, and Manulife on staging and QA environments, performing **regression**, **UAT**, and **exploratory** tests to validate functionality and client-specific requirements

PROJECTS

Leva | *Python, NodeJS, PostgreSQL*

- Architected Leva, a full-stack B2B FinTech OS to solve the freight industry's critical cash-flow gap by using workflow data as an underwriting engine for embedded trade finance.
- Developed the professional React/TypeScript frontend using React Query for asynchronous server-state caching/mutations and Zustand for lightweight global auth state.

BehindTheTick | *Next.js, TypeScript, Tailwind CSS, Node.js, Recharts*

- Engineered a full-stack platform that ingests Senate, House, and Form 4 filings, normalizes data, and streams updates to a responsive dark-themed UI via WebSockets in under 500 ms
- Delivered interactive dashboards with Recharts, and enforced zero-lint TypeScript standards

WebVision | *C, cURL*

- Developed a C-based multi-threaded Web Crawler using pthreads and synchronization primitives like mutexes and semaphores to extract unique PNG URLs while reducing processing time by 20%

RTOS Kernel | *C, ARM Assembly*

- Developed a preemptive RTOS kernel from scratch for ARM Cortex-M4, supporting 16 concurrent tasks with EDF scheduling algorithm
- Implemented kernel primitives including SVC-based system calls, PendSV/SysTick interrupt handlers, and a custom heap allocator with block coalescing that reduced memory fragmentation by 40%+
